

You will use program such as OBS Studio, Streamlabs, XSplit, or Elgato Game Capture for live streaming and all of these software support swapping backgrounds using green screens or 'Chromakey' as they're technically known. The key element that you need to remember is that the background should be evenly illuminated. You can use any colour you want as long as it does not match what's in the foreground. As long as it is well lit, you can swap it out using any popular video editing or live streaming software. Here are some popular chromakeys that you can buy.

1. Fancierstudio Chromakey Green Screen Kit

The Chromakey Green Screen Package of Fancierstudio includes 10 x 12 ft cloth chromakey backdrop, 8 x 10 ft aluminium backdrop support, and three lights. It also contains a carrying bag, making it convenient for you

to travel to the house of a friend.

It's easy to set up. Prop up the backdrop stands. Insert the upper bar in the backdrop stands and then position it properly. Follow this up by raising it to the desired height. Smoothen out the fabric and set each

light as close as possible so that the shadows are not being cast. This kit offers a decent value for money and is an excellent choice if you are a first-time streamer.

PROS

- Supports standard for the backdrop, 2-floor lights, and case
- Easy to adjust
- Reasonable price
- Mobile phone.

CONS

- Easily bendable
