

streams. While you can use your smartphone, too, for this purpose, you should invest in professional camera equipment to enhance the quality of the stream, especially if you are streaming in 1080p or above.

You can opt for a webcam, DSLRs, or mirrorless cameras. Here's a list of cameras used by some of the top streamers:

- Shroud - Sony Alpha a6000 Mirrorless Digital Camera
- Choco Taco - Logitech C920
- Kaymind - Logitech C922x Pro

● Audio equipment

As a streamer, you need to ensure that viewers get a crisp, loud, and clear audio without background noise. Thus, you will need to have a high-quality microphone to talk to your viewers during the stream and share tips and tricks and provide commentary during gameplay. The microphone placement is important, too, as it shouldn't block the streamer's face while also ensuring that it can capture the sound.

There are a plethora of microphones available in the market and usually filled with jargons on their labels. Thus, it can get quite tricky in choosing the right micro-

phone. A cardioid microphone that can pick up sounds in the range of 50 Hz to 20,000 Hz and is easy on the pocket is enough for a game streamer. However, you can opt for bidirectional or omnidirectional microphones, if required. Always check the audio output and apply additional audio filters to fine tune your microphone feed. It makes a huge difference.
