Video editing software for transitions and overlays

and upwards. Many websites provide free and paid tools for stream overlays. Additionally, if you have the resources, you can create customised overlays for your streams.

Similarly, it would be best if you had transitions between your game-play video, webcam only feeds, or viewers chats and messages screen that can increase the engagement levels and improve the stream's quality.

Miscellaneous Steps to Improve your Stream Quality

In addition to these methods, there are other ways to improve your video and audio quality. Some are discussed below.

- First, you need to bind hotkeys on your keyboards to efficiently and smoothly transition between various video and audio modes. You can set up hotkeys for the most-used actions, such as changing from your game feed to webcam only feed
