

To the next level

Starting off with live streaming is not difficult. There are plenty of mobile apps that let you go live with the touch of a single button. With video game live streaming, you need to use a PC or a console as the bare minimum. Most platforms such as Facebook, Twitch and YouTube have also tried to make it easier for gamers to go live. However, they all come across as lacking in some manner or the other.

The FastTrack from January 2021 was for folks who are just starting out with live streaming video games. This FastTrack is aimed at helping you improve your streams and take it to the next level. We'll be looking at setting up processes to identify new games to stream and what new gadgets and gizmos will you need for the same. As an example, we peek into the world of table top games.

We then look at additional hardware that you can invest in for better production quality. This is where green screens and mixers come into the picture. And as you look towards growing your channel, you will need to understand what makes each platform tick. What is the secret sauce that the big guys have figured out that the rest haven't. We're talking about the algorithm. Besting the algorithm with a few simple tricks can expose your stream to a much wider audience and accelerate your growth like no other.

And once you do grow, you will need some help to manage things. You can certainly look towards enrolling a few interns or friends to help with
