

Introduction

Game streaming is no longer simply about playing games and streaming them to random followers or even the public. Stream video games has become a legitimate form of entertainment for millions of people, and scores of viewers tune in every hour to view the latest instalment of long running game series, played by their favourite gamers.

With the rise of YouTube and twitch as game streaming services, and with the jump in the streaming and viewing of video games that the last year has seen, viewers have begun to demand more from gamers. They want greater access into their world, and a greater say in the games they play, how they play these games, and even nitty gritty details such as the music being played during the stream.

This has fueled the rise of chatbots. Through chatbots, stream viewers can comment and pass on recommendations to streamers in real time, and even converse with them. Over the years, streamers have come to take chatbots very seriously, since they allow streamers to connect with their audience directly and live.

Among the most popular chatbots for YouTube and Twitch is the Nightbot. Nightbot is popular as it gives both streamers and viewers a number of privileges that other chatbots don't. Let's go through how you can configure Nightbot, and in the process explore the many options it provides you.

Setting Up Nightbot

Setting up Nightbot is a rather easy process. Currently, Nightbot is only available on Twitch and YouTube, and hence you can only use Nightbot through these game streaming services.

To set up Nightbot, you first need to go to the Nightbot Homepage. Here, you will need to sign in to Nightbot, and you can only do this through the services it is compatible with, i.e. YouTube and Twitch. You will then be able to configure Nightbot on the service that you sign in using.

Once you have signed in, Nightbot will take you to the Nightbot Control panel. The Nightbot Control Panel is where you can control the chatbot and access most of the settings and statistics associated with it on your channel. The Nightbot Dashboard shows you really detailed statistics about the performance of Nightbot on your channel.

Once you are on the Nightbot Dashboard, you need to make Nightbot join your channel. To do so, you need to click the Join button on the top
