right, after which a popup message will explain how you can make Nightbot moderate your channel for both YouTube and Twitch.

Nightbot Commands and What They Do

Nightbot commands are a significant selling point of the chatbot. Not only are the existing Nightbot commands really versatile, but Nightbot also allows you to create your own customized commands for activities that the existing commands do not cover.

The default commands of Nightbot allow you to control various functions within the chat itself. Here is a list of the default commands of Nightbot.

- **!commands:** This allows all users of Nightbot to view a list of the commands applicable to the chat. Additionally, it also helps moderators manage the custom commands that have been introduced.
- **!commercial:** If your channel is currently partnering with a brand, this command allows you to run an advertisement on the stream.
- **!filters:** This command allows the moderators of the chat to check and manage the settings for the spam moderation filter.
- **!game:** This command helps the moderators change the game that is currently being played on the stream, and also allows the viewers to know what is being played.
- **!marker:** This helps viewers in creating a stream marker in Twitch to which they can later return.
