

To add a new command, you need to click on Add Command in the Commands page. Here, you will be required to fill in certain information. This includes the name of the commands, the message that you want to display, the cool down time, the access level, and whether the command is an alias for another.

Performing Giveaways in Nightbot

Nightbot can easily be configured if you have giveaways during your stream. However, what is astounding is the sheer number of options that Nightbot allows you to play with in the contest itself.

You can visit the Giveaway page on Nightbot through your Nightbot Control Panel on which you will be able to see the list of giveaways you have floated, the users who have applied for an are eligible for the giveaway, and the chat window.

In the Eligibility window on the page, you will be able to see the users who are eligible for a particular giveaway as per your criteria. These users are automatically indicated with a blue mark in front of their name as they become eligible for the giveaway. If you want to change the eligibility of certain users in the list, you simply need to click on this mark to toggle the eligibility on or off. You can also click on Reset Eligibility, which will set all users to ineligible.

In the Giveaway Panel on Nightbot, you can select the level of users that are eligible to participate in a certain giveaway. There are three levels you may choose from. The first is the Active User level, in which eligibility depends on whether a user has spoken during a given time period. The second is the Keyword level, in which all users that have typed a certain keyword become eligible. This is useful for a question-and-answer type contest. The third is the Random Number level, in which you can generate a random number among two selected numbers and the first user who types this number wins.

The name and profile of the user who wins will be displayed, and you can send them a direct message to inform and chat with them.

Managers

Managers are the most important users of Nightbot. This is because users who are designated as Managers can access every capability of Nightbot, including all levels of the Dashboard as well as the Control Panel. It is hence important that the users that you designate as managers are few in number
