

queue of upcoming songs in the stream. Using the settings in AutoDJ, you can enable or disable the recommendations of viewers from being added to the queue, or clear the queue itself. You can also add a song as a moderator or manager.

There are a number of settings that AutoDJ includes. You can set the minimum level of users who can recommend songs as well as the providers (such as YouTube) from which songs can be requested. You can also select your default playlist that must play if your queue is empty. You can set a queue length under 100 and limit the included songs to a specific playlist. You can set a maximum number of songs that can be recommended by a particular user level and also exempt certain user levels from this limit. There are also checks on the quality of content and the genre that can be added to the queue.

## Spam Protection

Nightbot provides great options to protect your chat from spam comments. You can blacklist words or phrases from the chat allowing messages having these to not be posted. You can also prevent all caps or majority caps messages on the chatbot. You can prevent chatter from posting emotes or links in the chat window, and from including too many symbols in their messages. Additionally, you can prevent them from repetitive messaging, or repetition of words or phrases in the same message.
