

and each profile has its own individual mapping for the keys. And you can have one of the keys set to allow users to switch profiles.

How can I use Stream Deck for live video streaming?

The primary reason you should use Stream Deck for live streaming is that it makes things easy. While running any live stream, you have to pay attention to several aspects at the same time. And you have to remember the short-cut keys for every single application or service that you are using. For example, your mute key might be 'Shift+M' and you might have a video transition mapped to 'Ctrl+M'. In the heat of the moment, if you press the wrong key, you might end up with the wrong action. But with the Stream Deck, you have a visual representation under each key. A mute button looks like a microphone with a cross over it. And it changes when you do mute

your mic. There is little possibility of getting things wrong with a Stream Deck. And it's also angled in a way that everything appears clearly visible when the Stream Deck is placed right in front of you.

With the Elgato Stream Deck, you can have a quick overview of the actions, and you can push the button to accomplish whichever action you are willing to take. This could be referred to as something as easy as changing anything in a scene, switching, or triggering a countdown timer. Once you have used the commands for a while, you will realize that you will not look down as you can easily memorize the buttons and their location.
