

Streaming with OBS:

With all the necessary steps done, let us move on to the scene section.

1. Delete all the pre-programmed scenes and keep them empty.
2. Click the + button in the scene section. Name the scene.
3. Move to the sources button. Click the + button, navigate to the images and find an image to upload it.
4. If you want to add a video clip, you can repeat the above section.
5. With desktop audio as the most powerful source, check the audio device connected to the PC and unmute only the audio device that you are going to use.
6. Now with one audio source and one video source in the source tab, add the microphones and webcam to the sources.
7. Now your webcam must pop up on the OBS canvas. The microphone is shown at the audio mixer tab under a new set of bars.
8. The completely customizable browser is available for streaming.
9. With software configured onto your hardware set up, go live streaming.

Game streaming with OBS:

Streaming PC games with OBS is quick. OBS can detect the games and import them automatically.

When you select game capture under the source button, you are left with a couple of options. you can select either fullscreen mode or windowed mode by selecting the mode in the drop-down box.

Steps:

1. Click the “+” button under sources.
2. Select the game capture option.
3. select mode in the drop-down box.
4. Choose fullscreen or window from the mode.
5. start live streaming.

Stream overlay addition:

Adding an overlay to the live stream is what most streamers prefer. we can create overlays for making streaming more professional. Adding social media alerts for new followers, subscribers, and goals are some of them.

To add them, follow these steps:

1. Click the “+” button under the source menu.
2. Select “browser source”.
