

One, because you are too good at the game – you have earned a reputation for your game-playing skills, and your viewers want to learn the gaming skills from you.

Second, because you want to build a community of like-minded people. Identify, which is for you!

2. Work on your on-screen persona

For getting more audience on a live stream, you not only need to be entertaining and interactive, but you also cannot be sitting silently and playing your game; you should be comfortable and confident in your skin.

You may be animated, expressive, and talkative, or you may be silent, and an introvert; on-screen personality is about you being happy with who you are. Your viewer should be able to feel that connection because you are so comfortable with yourself.

3. Building relational value through participation from viewers

Tell people about yourself, your experience, your life, your schedule, your mindsets, and so on. When you share, you will have the audiences also open up. It makes you more realistic and connection-worthy. You must encourage the viewers to participate in dialogues with you – you can play the game with your viewers, which is one of the popular ways to connect with them. However, if your audience comes to watch you play because you are a superb game player, focus on playing the game. That will add value to their experience.

Live streaming

4. Be genuinely interested

The interest has to be in the game, such as the win or defeat matters to you. When you show that kind of attitude, your viewers are involved too, almost to the same extent, and cheer with you when you make winning moves. People can see that you are trying hard to win the game. People appreciate such authentic efforts.

5. Responding to comments and chats

It is one of the important aspects of live streaming. If you are too focused on your game, that's understandable. If you are not too much into the game and still not responding, your viewers will lose interest soon. It will not impress them, and they will realise that the streaming is of no value. Hence, you need to respond promptly to comments.
