

computer is powered on. If you are using a CD or DVD, you can insert it and then reboot the system.

If you are using an amd64 or i386 based processor, you will be asked to choose the disk you wish to boot from on startup. When your disk or drive has been loaded, the FreeBSD boot loader menu will appear. It contains the following options.

- Boot multi-user
- Boot single user
- Escape to loader prompt
- Reboot
- Kernel
- Boot Options

When you press `[Enter]`, you are met with the Welcome Menu. To start installing FreeBSD, click on `Install`. You can also go to `Live CD` and press `[Enter]` to try FreeBSD out before you install it.

FreeBSD Boot Loader Menu

Using `bsdinstall`

The first step in the installation of FreeBSD using `bsdinstall` is to load the keymap files. Once all the available keymap files have been loaded, you will encounter the Keymap Selection Menu. This is an important consideration since it decides how the system will react when you press a key on your keyboard. Among the list of keymaps on the screen, select the most similar keymap to your keyboard layout. When you select a
