

you can also receive updates every time a certain port gets an update.

- You can search the binary package repository in FreeBSD for a particular application.
- If the Port Collection is installed on your FreeBSD system, you can use either `whereis` or the `echo` statement to find the location and the local version of a particular port.
- You can use the `make search name = <port-name>` statement after changing director to ports in FreeBSD to obtain information about a specific application or program.

Binary package management

The `pkg` tool of FreeBSD is the primary tool now used for binary package management. If you are a user who does not want to intervene in the compilation process and want to simply utilise binary packages already built to install an application, `pkg` is the tool for you. Free BSD comes built with a bootstrap utility that's essential for the installation of `pkg`. You can install `pkg` over a network or locally.

Once you have `pkg` installed, it can be used to carry out the following tasks.

- It can install a package through the code `# pkg install program` (the program is the name of the program to be installed).
- It can upgrade all installed packages through the command `#pkg upgrade`.
- It can audit programs for vulnerabilities through `#pkg audit -F`.
- It can remove packages that are no longer required through `#pkg autoremove`.

```
root@mac:~ # pkg search postfix
postfix-3.2.2_1      Secure alternative to widely-used Sendmail
postfix-current-3.3.20170613.5 Experimental Postfix version
postfix-current-sasl-3.3.20170613.5 Experimental Postfix version
postfix-logwatch-1.40.03 Postfix MTA log parser
postfix-policyd-sf-1.82.1_1 Anti-spam plugin for Postfix (written in C)
postfix-policyd-spf-perl-2.010_1 SPF policy service for Postfix written in Perl
postfix-policyd-weight-0.1.15.2_6 Weighted policy daemon for postfix
postfix-postfixd-1.35_1 Postfix firewall policy daemon
postfix-sasl-3.2.2_1 Secure alternative to widely-used Sendmail
postfix211-2.11.8_1 Secure alternative to widely-used Sendmail
postfix211-sasl-2.11.0_1 Secure alternative to widely-used Sendmail
postfixadmin-3.8.2 PHP web-based management tool for Postfix virtual domains and users
py27-postfix-policyd-spf-python-1.3.2_1 Pure Python Postfix policy daemon for SPF checking
trac-email2trac-postfix-2.10.0 Convert email to trac tickets
