

You can also easily find these installation codes online.

Display hardware

So, as we have learnt before, the X server controls the monitor, mouse, and keyboard. It handles the following things:

- One or more pointing devices like mouse, touchscreens, etc
- One or more keyboards
- One or more video cards

All this is dedicated to one display only. If there are multiple displays for a single desktop, then one must use a separate X display.

Pointing devices

First, let's talk about pointing devices; there can be multiple pointing devices for a single computer, like in the case of a laptop – you have a mouse and a built-in mousepad. You can use the following configuration for setting the number of mouse buttons.

```
Section      "InputDevice"
Identifier   "Mouse0"
Option      "Buttons"      "5"

End section
```

Keyboards

Keyboards can also be multiple in laptops where an external keyboard can be attached. The keyboard transmits a scan code that corresponds to the button location when a button is pressed and sends another
