Apache OpenOffice

Apache OpenOffice is a free and open source suite, developed under the Apache Software Foundation. OpenOffice includes all the productivity packages with a word processor, presentation, spreadsheet, a draw application, math editor, and a database management system with support from numerous file formats.

Here is the code for installing the Apache OpenOffice package:

- `# pkg install apache-openoffice`

Then you can use this direct command to start using OpenOffice for your FreeBSD system:

- `% openoffice-X.Y.Z`

And in case the package is not available for Apache OpenOffice, then you can use specific Ports collection method by compiling source code:

- `# cd /usr/ports/editors/openoffice-4`
- `# make install clean`

LibreOffice

Developed by the Document Foundation, LibreOffice is a power-packed office suite with a high productivity environment. Available in more than 100+ languages, essential programs include a word processor, spreadsheet, drawings, diagrams, and slideshows for comprehensive working with mathematical functions and databases.

This code can be used to install the English version of the LibreOffice package on your system:

- `# pkg install libreoffice`
