

Here is the command to start using the LibreOffice application on your FreeBSD system:

- `% libreoffice`

And if the LibreOffice package is not available or doesn't work somehow, then you can use the Ports Collection method by compiling source code.

- `# cd /usr/ports/editors/libreoffice`
- `# make install clean`

Document viewers

In recent years, many document viewers have gained a lot of prominence. Here is a shortlist of document viewers that are highly compatible with FreeBSD OS.

Application Name	Resource Required	Ports Installation	Dependencies (major)
Xpdf	Light	Light	FreeType
Gv	Light	Light	Xaw3d
Geeqie	Light	Light	Gtk+ or GNOME
ePDFView	Light	Light	Gtk+
OKular	Light	Heavy	KDE

Xpdf

Xpdf is a highly proficient and light-weight PDF viewer with few resources and power-packed features. Xpdf doesn't require any special toolkits and has all the standard fonts for a smooth UI.

Here is the code to install this document viewer on your system:

- `# pkg install xpdf`

And the following method represent the method to install via the Ports Collection:

- `# cd /usr/ports/graphics/xpdf`
- `# make install clean`
