

Okular

Okular is a magnificent document viewer with powerful features developed by the KDE community on the basis of KDE and Qt libraries. Okular has the capabilities to open multiple file-formats that include CHM, ePub, PDF, PostScript®, DjVu, and XPS for managing all your productivity.

This code represents the syntax to install Okular on your system as a package.

- `# pkg install okular`

And in case you find it unavailable, then you can use Ports Collection for installing by compiling source code respectively.

- `# cd /usr/ports/graphics/okular`
- `# make install clean`

Finance

There are several financial applications that are readily available and easy to install on the FreeBSD OS. Most of these applications can manage versatile file-formats for handling finance activities.
