

Application Name	Resource Required	Ports Installation	Dependencies (major)
GnuCash	Light	Heavy	GNOME
Gnumeric	Light	Heavy	GNOME
KMyMoney	Light	Heavy	KDE

GnuCash

GnuCash represents an astonishing financial application that offers comprehensive support for the double-entry book-keeping system. Some of the essential features include managing earnings and spendings, stocks, multiple bank accounts, and has a highly user-friendly environment. GnuCash follows sophisticated management of accounts, smart register, auto-completion, and several keyboard accelerators. GnuCash offers support for multiple currency formats and international date usage as well.

Here is your code to start using GnuCash on your FreeBSD OS:

- `# pkg install gnucash`

Here is the code for installing GnuCash through the Ports Collection by compiling source code precisely:

- `# cd /usr/ports/finance/gnucash`
- `# make install clean`

Gnumeric

Built by the GNOME community, Gnumeric is a popular spreadsheet program full of highly useful features. Gnumeric is known for having a large number of in-built functions, multiple cell formats, and an autofill system for comprehensive sequence usage. Gnumeric can work around (import and export) with several formats that include CSV, spreadsheets, Microsoft Excel (.xlsx), Lotus 1-2-3, Quatta Pro, HTML, Open Document, and so on.

Here is the syntax to start installing this important financial application on your system.

- `# pkg install gnumeric`

This is the code for installing Gnumeric on your OS via compiling source code using the Ports Collection:

- `# cd /usr/ports/math/gnumeric`
- `# make install clean`
