

KMyMoney

KMyMoney is a spectacular finance application offering a double-entry book-keeping system using KDE technologies. The ease of user-friendly and highly sophisticated software makes KMyMoney an ideal choice for your personal use. You can build numerous wealth reports, track and manage investments, import QIF files, and even have multiple currency support.

Here is the syntax for installing KMyMoney as a package on your FreeBSD OS:

- `# pkg install kmymoney-kde4`

And in case you are not able to use the package, then you can use the following in the Ports Collection using the code source.

- `# cd /usr/ports/finance/kmymoney-kde4`
- `# make install clean`

Conclusion

FreeBSD User Experience (UI) plays a key role for the users to enjoy the OS to its maximum performance. Browsers, Productivity, Document Viewers, and Finance applications add more features to your OS. These desktop applications are essential to enhance your performance on a daily basis and provide comprehensive support in achieving desired results.

Browsers provide you with the required platform for surfing the internet and enjoy global platforms for a specific use. Productivity adds more functionality to enjoy the different formats of files on your system. While Document Viewers will give you applications to check your important pages, files, PDFs, etc., Finance applications allow you to manage money transactions precisely.

Now you will be able to install these applications on your FreeBSD OS and make the most of these amazing operating systems to align with resources planning, strategies & implementations. **d**
