

Ripping audio tracks

Firstly, a CD must be ripped to the hard drive before you can encode it. You can use the cdda2wav tool for this purpose. Put the audio CD in the drive, and type the following command:

```
# cdda2wav -D 0,1,0 -B
```

To rip individual tracks, specify them with the -t command. For instance:

```
# cdda2wav -D 0,1,0 -t 5
```
