

using popular audio software. We also saw how to configure and use image scanners on the FreeBSD platform with the SANE (Scanner Access Now Easy) API. We also learned how to provide access to the image scanner to a user.

In the next chapter, we will learn about configuring the FreeBSD Kernel. We will have a look at the kernel, which forms the core of any operating system. We will also learn how to create and install a custom kernel in FreeBSD and why you need to have a custom kernel for your device. In the end, we will discuss some troubleshooting tips that can help if something goes wrong during the custom kernel creation and installation process.
