Data derived from community demographics goes a long way towards understanding community sentiments

Country of origin

Knowing about the native countries of your community members helps you acquire an in-depth understanding of both their language competencies as well as their cultural backgrounds. Subsequently, this allows you to curate activities and campaigns that are sensitive to everyone's best interests. For instance, should your community happen to contain members from a particular linguistic or ethnical background, then you are free to conduct activities that are increasingly tailor-made for them and which have no correlation with other groups out there. However, on the flip side, should your community happen to include people from diverse backgrounds, then it becomes essential for you to come up with engagement strategies that are not only inclusive in nature but also free of racism, sexism, harassment, discrimination, and obscenity of any sort. Additionally, knowledge of their
