

first educate their community members on the various nuances of Discord as opposed to subjecting them to community engagement activities from the get-go. It is important to understand that veteran members of your community and old users of the Discord platform might have different expectations and uses of the server compared to the newer users. This is usually a breeding ground for conflict. What is important here is to strike a balance between the older and the more recent users and engage with each faction accordingly in order to preserve the overall health of the community.

Details of devices

Knowing about the devices using which your community members access Discord gives you a proper idea of how various users view your server. This is important because the Discord desktop experience is considerably dif-

Understanding user distribution over desktop and mobile is important

ferent from its mobile app experience. Subsequently, this allows businesses to curate campaigns that cater suitably to both of these user experiences. Additionally, with the knowledge of user distribution at their disposal, hosts get the liberty of implementing certain measures that work towards improving the overall interaction and engagement. For instance, if your server has a higher percentage of mobile users, then it is necessary that you have shorter information channels in place. This allows your members to navigate easily across the server.

Traffic sources

Once you're familiar with the user demographics of your community, you should concern yourself with analysing the traffic sources of your server. You can do so with the help of the Audience insights tab. Carrying out a thorough analysis of the traffic sources allows you to not only comprehend the composition of your community but also lets you track its growth trajectory. Additionally, you can view all the new members on your server with the help of the Growth & Activation Tab.
