

With Vue.js, it is easier to integrate it with other extensions and libraries. Moreover, it is well-supported by Safari, IE, Firefox, and Chrome.

Compatibility Note

There is no support from Vue for IE8 and below. It is un-shimmable in Internet Explorer 8 as it uses features of ECMAScript 5. Nevertheless, it allows all browsers compliant with ECMAScript 5.

Semantic Versioning

For documented behaviour and features of all official projects, Vue follows semantic versioning. The exposed internals or undocumented behaviour are explained in the release notes.

Release Notes

Current stable version is 2.6.12. You can refer to the release notes of its previous versions on GitHub.

Vue Devtools

It is recommended to use Vue Devtools in the browser while using Vue. It helps you to check and debug the applications. The easy interface makes the process easier and simpler.
