

However, you had to use `DefinePlugin` in previous versions, that is Webpack 3 and earlier.

```
• var webpack = require('webpack')
•
• module.exports = {
•   // ...
•   plugins: [
•     // ...
•     new webpack.DefinePlugin({
•       'process.env': {
•         NODE_ENV: JSON.stringify('production')
•       }
•     })
•   ]
• }
```

Rollup

Apply `rollup-plugin-replace`

```
• const replace = require('rollup-plugin-replace')
•
• rollup({
•   // ...
•   plugins: [
•     replace({
•       'process.env.NODE_ENV': JSON.stringify('production')
•     })
•   ]
• }).then(...)
```

Browserify

You can make changes to the bundle by using the global `envify` transform.

```
• NODE_ENV=production browserify -g envify -e main.js |
  uglifyjs -c -m > build.js
```

CSP environments

Google Chrome Apps and similar environments coerce CSP (Content Security Policy) to prevent evaluation of expressions with `new Function()`. You
