

# Computed Properties

Why are computed properties the best for implementing complex logic, and how can it be done?

Computed properties are used to perform the quick calculations displayed in the view. These calculations are cached and only updated when needed. There exist several ways in Vue where the set of values are viewed. This further lets you view the data value, using simple expressions and filters to perform simple transformations for the content being uploaded. Also, computed properties are used to display the value based on a particular value being fed into the structure or the set of values modeled.

## Computed Properties

Computed properties allow an operator to have model-specific data and the complex values computed for the view. These values are bound to the
