function) to define the count as the computed property. This is because we will be able to access the component.

```

• <template>
• <p>{{ count }}</p>
• </template>
•
• <script>
• export default {
•   data() {
•     return {
•       items: [1, 2, 3]
•     }
•   },
•   computed: {
•
•
•
•   count: function() {
•     return 'The count is ' + this.items.length * 10
•   }
• }
• }
• </script>

```

• Computed Properties are cached

If you are familiar with Vue methods, you will be amazed to know the dif-
