

```

1 var app = new Vue({
2   el: '#app',
3   data: {
4     product: 'Socks',
5     image: './assets/vmSocks-green.jpg',
6     inStock: true,
7     details: ['88% cotton', '20% polyester', 'Gender-neutral'],
8     variants: [
9       {
10        variantId: 2234,
11        variantColor: 'green',
12        variantImage: './assets/vmSocks-green.jpg'
13      },
14      {
15        variantId: 2235,
16        variantColor: 'blue',
17        variantImage: './assets/vmSocks-blue.jpg'
18      }
19    ]
20   },
21   cart: 0
22 },
23 methods: {
24   addToCart() {
25     this.cart += 1
26   },
27   updateProduct(variantImage) {
28     this.image = variantImage
29   }
30 }
31 })

```

Example code

Rather than printing the variant's colour into a **p** tag, use it to set the style of a div's **background-colour**. Instead of hovering over text in a **p** tag, we can hover over coloured squares, which will change the product's icon to fit the colour hovered on.

First, we'll add a **colour-box** class to our div, which will offer it a width, height, and margin. Since we're already printing "grey" and "blue" on the page, we can use those variant colour strings and bind them to our style attribute as follows:

```

16 <div class="color-box"
17   v-for="variant in variants"
18   :key="variant.variantId"
19   :style="{ backgroundColor: variant.variantColor }"
20 >
21   <p @mouseover="updateProduct(variant.variantImage)">
22     {{ variant.variantColor }}
23   </p>
24 </div>

```
