

Conditional Rendering

If-else in context of Vue.js

In the web development industry, we keep hearing the news of some new frameworks being launched now and then. Some frameworks hold their integrity and are not getting weak even in this competitive environment. Vue.js is one such progressive framework that web developers still use to develop the website's user interface. The core library of this development framework focuses on the view layer only. It is easy to integrate with other libraries and can be picked up without much struggle. There are many modern solutions that this framework provides, like powering the sophisticated single page application when it is used in collaboration with modern tools and support libraries.

There are many reasons why JavaScript frameworks are preferred over other web development frameworks all around the world. The functionalities they provide, the features they let the developers add might not be available with other development platforms. Vue, like other development
