# Forms

What specifically do we expect when we hear “dynamic forms”?

## Introduction

Vue has developed by leaps and bounds in recent years, surpassing Angular as the second most used frontend platform in 2018. In this post, I'll show you how to use Vue to create a basic type. One of the most appealing features of Vue is that you can get started with it using only vanilla JavaScript and no additional npm plugins or languages. Including Vue via script tag is the simplest way to get started. This article would talk about the vue npm package and how to build a bundle with webpack for educational purposes. It's beneficial to learn how to deal with forms properly in our favorite frameworks, as it can save us time and effort during growth.

## Requirements for a Dynamic Form

- A single command controls the whole form.
- Configuration file in JSON
- For its sectors, the Form makes use of reusable Vue components.
