Components

Vue follows the components-based approach, where the application is broken into smaller and reusable chunks.

Introduction

The best thing about Vue is that it uses the components-based approach to create the user interface. According to this approach, the user breaks the applications into small and reusable components that combine later to form a complex structure. These Vue components are like the custom elements that can be reused. Once the Vue components are created, the component name becomes the custom elements that are usable for the Vue instance. Vue components are a very useful feature of Vue that makes it organised, readable, and easy to manage.

In this article, you will learn about the components in Vue. You will learn how to create these components, pass data between them, using Vue elements offering more content within components. There are more concepts related to components, organised props, event bus, and slots. All
