

these have been explained in the article. We will cover all the details along with examples for a better understanding.

What Are Vue Components?

To understand Vue components, consider the below example. In this .html file, the two components created are 'test_c1' and 'test_c2'. In the .js file, the two Vue instances are created with ids 'test_c1' and 'test_c2'.

Syntax to create the Vue components:

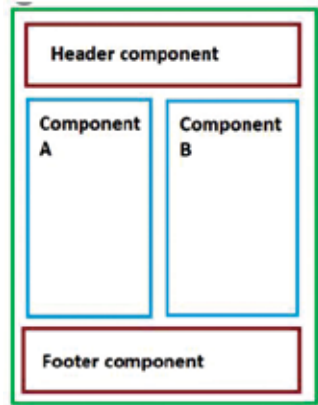

```
Vue.component('Component Name',
{<Options>});
```

Refer the example code snippet to understand how to create Vue components. The code is created and saved in the html file with <filename>.html. Below is the html file code:

```
<html>
  <head>
    <title>VueJs Instance</title>
    <script type = "/javascript" src = "/
vue.js"></script>
  </head>
  <body>
    <div id = "test_c1">
      <testcomponent></
testcomponent>
    </div>
    <div id = "test_c2">
      <testcomponent></
testcomponent>
    </div>
    <script type = "/javascript" src = "/
vue.js"></script>
  </body>
</html>
```

J1.js file containing below code:

```
Vue.component('testcomponent', {
```

Components of Application
