

```

•       template : '<div><h1>This is vue component</h1></div>'
•   });
•   var v1 = new Vue({
•       el: '#test_c1'
•   });
•   var v2 = new Vue({
•       el : '#test_c2'
•   });

```

How to Create Vue Components?

There are different ways to create Vue components in a Vue application. Using `Vue.component` is the most common method to create reusable Vue components for small to medium-size projects.

How Vue Components Work?

Copyright Attribution: Medium

Below is the code to create the Vue components:

```

•   Vue.component('test1', {
•       data() {
•           return {
•               count: 0
•           }
•       },
•       Template: '<div>{{count}}</div>'
•   })
•   New Vue({ el: '#app'})

```

In the above code, `test1` is the component created. This component can be used as below:

```

•   <div id="app">
•       <test1></test1>
•   </div>

```
