

```

    props : {
      owner : {
        type : Object,
        required : true
      }
    }
  })

```

Reusing Components

The components, once created, can be used many times. Every time the component is used, it functions separately irrespective of the presence of code to reuse the component. That is because every time the component is used, a new instance gets created.

```

<div id="app">
  <test1> </test1>
  <test1> </test1>
  <test1> </test1>
</div>

```

Dynamic Components

Dynamic components can be created with the help of keyword `<component>` `</component>`.

Refer to the below example to create dynamic components.

Dynamic Component

```

<html>
<head>
  <title> VueJs Example </title>
  <script type = "text/javascript"
src = "js/vue.js"> </script>
</head>
<body>
  <div id = "databinding">
    <component v-bind :
is = "view"> </component>
  </div>
  <script type = "text/javascript">

```
