

```

    var vm = new Vue ({
      el : '#data-binding',
      data : {
        view : 'component1'
      },
      components : {
        'component1': {
          Template : '<div> <span style = "font-size : 25; color : red;"> Dynamic Component </span> </div>'
        }
      }
    });
  </style>
</body>
</html>

```

Output: The below output will appear on the screen in the browser when the above code executes:

Dynamic Component

The syntax to create dynamic component is as below:

```
<component v-bind : is = "view"> </component>
```

In the above syntax, view is assigned to v-bind : is, where view can be defined as below:

```

var vm = new Vue ({
  el : '#data-binding',
  data : {
    view : 'component1'
  },
  components : {
    'component1' : {
      Template : '<div>
<span style = "font-size : 25; color : red;"> Dynamic Component </span> </div>'
    }
  }
})

```
