

```

•   Vue.myGlobalMethod = function () {
•     // specific logic ...
•   }
•
•   // This section adds a global asset.
•   Vue.directive('my-directive', {
•     bind (el, binding, vnode, oldVnode) {
•       // specific logic ...
•     }
•     ...
•   })
•
•   // This section adds particular component options.
•   Vue.mixin({
•     created: function () {
•       // specific logic ...
•     }
•     ...
•   })
•
•   // This section adds an instance method to the code
structure.
•   Vue.prototype.$myMethod = function (methodOptions) {
•     // specific logic ...
•   }
• }

```

And once you have built the first plugin in Vue.js, you can easily distribute it to the whole community using Github. And you can further publish the package to NPM to give new developers to start using this plugin.

Here are some of the popular Vue.js plugins that are common among all applications.

Vue-router

It is the most found single-page application plugin as an official router for Vue.js. Vue-router seamlessly integrates for mapping components, performing multiple tasks, nesting routes, and more.

Vuex

Vuex is an ideal choice for the plugin in building large complex apps that
