

Customizing the theme

A theme gives you the option to customize the design in your way. In Vue.js, there are two basic variations of color with light and dark themes. Here, by default, the application has a light theme and can be changed to dark using the below code.

For Vuetify, a Material Design UI library for UI, the code for changing from light to dark color theme is:

```
• // src/plugins/vuetify.js
•
• import Vue from 'vue'
• import Vuetify from 'vuetify/lib'
•
• Vue.use(Vuetify)
•
• export default new Vuetify({
•   theme: { dark: true },
• })
```

On changing the color theme, all the children's elements and components will automatically inherit the dark colors.

Default colors for Vuetify are:

```
• {
•   primary: '#1976D2',
•   secondary: '#424242',
•   accent: '#82B1FF',
•   error: '#FF5252',
•   info: '#2196F3',
•   success: '#4CAF50',
•   warning: '#FFC107',
• }
```
