

Especially when there are CSS frameworks and plugins that have already thought of everything pertinent to all the various view-ports that will be used to render your application. Purely because of the fact that this is a JavaScript framework gives it a significant advantage. Especially considering that the ES6 Standard has evolved JavaScript and made it much more performant.

With all the things that we've covered in this FastTrack and the one before it, we dive deep into building a simple project that will help you gain a good understanding of how it all comes together. We're building a simple streaming app UI that's reminiscent of what Netflix looks like. Incidentally, Netflix actually uses Vue.js for some of its internal applications.

With this FastTrack, we hope that we've given you a good reason to pick Vue.js for your next web app. If there are any other frameworks or languages that you'd like covered, please drop us a line on editor@digit.in and we'll get right on it. In the meanwhile, we suggest that you get cracking!
