

We'll now build a router-link in the navigation bar to direct the users back to the home page. Our home is located at '/' i.e. the Intro component. Then we need to build another router-link to let the user view the next component i.e Movie Trailer. We'll create a target of '/' + \$route.params.id + '/trailer' to do this.

```

• const Movie = {
•   template:
•     `<div class="hero-body"
•       :style="{ 'background-image': selectedMovie.largeImgSrc
•     }">
•       <header class="nav">
•         <div class="container">
•           <div class="nav-left">
•             <a class="nav-item">
•               <i class="fa fa-bars" aria-hidden="true"></i>
•             </a>
•             <router-link to="/" class="nav-item is-active">
•               Home
•             </router-link>
•             <a class="nav-item is-active">
•               <span class="tag is-rounded">Films</span>
•             </a>
•             <a class="nav-item is-active">
•               Shows
•             </a>
•             <a class="nav-item is-active">
•               Music
•             </a>
•           </div>
•           <div class="nav-right desktop">
•             <span class="nav-item">
•               <a class="title">
•                 VueFlix
•               </a>
•             </span>
•           </div>
•         </div>
•       </header>
•       <div class="container description-container">
•         <div class="columns">

```
