

```

• color: #fcff4c;
•
• @media(max-width: $medium) {
•   position: initial;
•   display: block;
• }
• }

```

Now, we need to apply conditional class bindings within our Movie component template and our Footer section. We'll also need to create the event handler for the add to favorites button in our Movie component.

For our Movie component:

```

• const Movie = {
•   template:
•     `<div :class="{ 'favorite-shadow': selectedMovie.favorite
• }, 'hero-body'}`
•     :style="{ 'background-image': selectedMovie.largeImgSrc
• }">
•     <header class="nav">
•       ...
•     </header>
•     <div class="container description-container">
•       ...
•       ...
•       ...
•     <div class="links">
•       <router-link
•         :to="{path: '/' + $route.params.id + '/trailer'}"
•         class="button play-button">
•         Play <i class="fa fa-play"></i>
•       </router-link>
•       <a
•         class="button is-link favorites-button"
•         @click="addToFavorites">
•       <span
•         :class="{ 'hide': selectedMovie.favorite }">
•         Add to
•       </span>
•       <span
•         :class="{ 'hide': !selectedMovie.favorite }">
•         Remove from
•       </span>

```
