

```

    &nbsp;   favorites
    <i class="fa fa-plus-square-o"></i>
  </a>
</div>
</div>
</div>`,
data() {
  ...
},
watch: {
},
methods: {
  selectMovie() {
    ...
  },
  addToFavorites() {
    movies[this.$route.params.id].favorite =
      !movies[this.$route.params.id].favorite
  }
}
}

```

We're basically telling the component that the class binding should be activated when the boolean `selectedMovie.favorite` is toggled.

A new Add/Remove button for the favourite is being added right next to the play button in the Movie component. Clicking this will toggle our `selectedMovie.favorite` boolean.

To add a check mark in the footer for movies marked as favourite, we'll use a simple icon.

```

• <div id="app">
• <section class="hero is-primary is-medium">
• <router-view></router-view>
• <div class="hero-foot">
• <div class="columns is-mobile">
• <div v-for="movieChoice in movieChoices"
class="column">
• <router-link :to="'/{movieChoice.id}'"
tag="li"
class="movie-choice">
• <i :class="['fa fa-check-circle favor
movieChoice.favorite ]'"></i>
• 

```
