

This becomes a life-saver when you have to use the same codes in any other way. You can also use it later by easily running it afterward.

Apart from these, here are some functionalities that are supported by the Python Editor. It is an editor that offers a robust environment to the end-user so that they are able to create different tools, scripts, and series.

- It offers multiple as well as single-line entries.
- You get a lot of tabbed work areas in the workspace of the software.
- It also allows line-numbering.
- The software also helps in color-coding.
- You can check out, retrieve and reuse commands from the history of the software.
- It is easier to search the directory, commands, and codes in the software.
- The software allows keyboard shortcuts that make using it even easier.
- You also get to enjoy script drop & drag.
