Help Menu

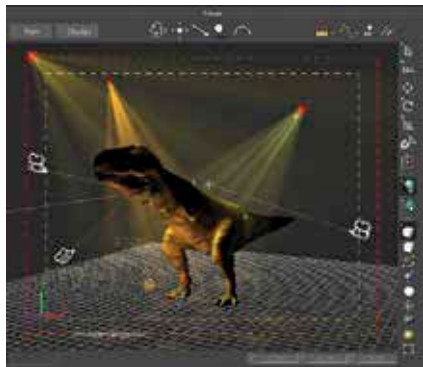

Colour Window

You can change the colour of lighting, models, materials, shading effects, and any other object or asset with a colour attribute with the Colour window. The current colour area, colour space area and colour area, are present on the Colour window.

Viewer Window

The Viewer window allows you to see the current scene, select, manipulate, and animate the components, and configure different display settings. It can be used to apply effects, constraints, and devices, as well as to measure and display the distance between two objects.

Your scenes are played here, also the rendered point
