

Options

The Open Options dialogue box appears, allowing you to choose the assets, settings, and takes to load.

No Animation

The current scene is replaced with the .fbx file. The keyframe animation of the assets and models has been disabled. Takes are not additionally loaded.

All Takes

Replaces the current scene with the assets, settings, and takes from the .fbx file. All assets and models have their animation loaded. If you already have anything in your scene, a save dialogue box will display, allowing you to save it before the new scene is started.

Distance

The Ruler tool can be used to measure the distance between two objects in the scene. While a calculated distance is shown, it is shown at the current camera view, allowing you to see work in an Orthographic view.

The cursor transforms to a 2D cursor when you use the Ruler tool or use the Ruler keyboard shortcut Ctrl-Shift-R.

When you use the Ruler tool () to hold over an object or element in the scene, the object gets highlighted in yellow, and the object's name is shown in the Viewer window.

When working on a big scene, the highlighted objects allow you to easily identify and choose the items to measure in the scene.

When you use the Ruler tool, hold over an object in the scene, then click-hold it; the cursor transforms from a 2D cursor to a 3D cursor, allowing snapping abilities to the object's surface. Snapping a Ruler to an object's surface provides visual feedback on where the object is being snapped.

Upon choosing the Ruler tool, hovering over an element in the scene, such as a light, and clicking it, the cursor transforms from a 2D cursor to a 3D cursor, allowing the snapping capabilities to the element's centre. Unlike other components, when you attach a Ruler to a camera, it immediately snaps to the camera's film back.

Upon measuring the distance between two components in the scene, the measured distance is shown as a yellow line with arrows on the start and finish points and the measurement units above the line by default. This calculated distance is a Ruler "object" in the system.
