

Ground contact position

Now go to a frame on the timeline and start posing the character, or go to the reference footage you shot or found online to get a concept of the fundamental framework for the contact position. According to a general

First foot down, next foot up position

rule of thumb, the leg with the heel placed on the ground should be nearly fully extended. You may now maintain a slight bend in your knee to avoid excessive popping during the cycle. (Keep in mind that manipulating the cycle requires you to be in Pose Mode.)
