

Body movements

When you're satisfied with the posture, hit "A" to select all of the controls, then choose the set keyframe icon to lock a keyframe for all of them. Because you don't want things to start moving at various times as you go into additional postures, you'll want to create a keyframe for all of the controls.

The next stage is to establish the opposite contact position, which will be the same stance but with the rear leg forward. To make this posture, press "A" to select all of the controls, then go to Pose>Copy Pose>move to frame 13 now, and then go to Pose>Paste Pose. This will repeat your first contact

Opposite contact position
