

dealing with the popping in the knees, which will almost certainly occur at this stage.

12. **Flap your toes**- The feet slapping solidly on the ground is a wonderful technique to emphasize the character's weight. Within one or two frames, the feet should shift from elevated to flat. Plant on the next position after easing out of the first. During the ease-out stance, you can even lift your toes to create some drag.
13. **Make Your Walk Shine** - Pushing the walk to the next level is the final stage in understanding when creating a walk cycle.
 - To improve the animation, add tiny details between the major locations.
 - Keep track of all of the arcs made by hands while positioning them.
 - Drag the fingers and also the head a little.
 - To add individuality, change the components of the walk cycle.
 - Return to the video, where you were taking reference, to discover items that you believe would help the animation, then complete the remaining part of the walk cycle.

Conclusion

Character animation is one of the most difficult tasks in the field of motion design. It requires an integrated approach and knowledge. Since our subconscious mind identifies the oddness in motion, it will be very hard for the animation beginner to identify it without proper knowledge if a character looks unnatural. Animation is one of the most interesting fields to showcase your creative mind.

Walk cycle is very important to create the characters in games and films. In a normal film, there are 24 frames. You need to follow many rules and guidance while creating one walk cycle. These are the fundamental guidelines. Animation, on the other hand, isn't necessarily about obeying the rules. Try to make your character appear natural, but keep in mind that with animation, we frequently exaggerate emotions and character features to experiment with how they are represented. Animation is more about the expression and enhancement of certain characteristics than it is about 100 percent replication of what is happening. So, go on, create your walk cycle now. **d**
