

Prepare the Scene

Steps to Prepare a Scene

1. Click on the Menu Bar and choose the new file. The 3D scene is created.
2. Go to the menu bar and select layout.
3. From layout, click on editing
Remember, the layout is set to editing by default. In addition, the above image displays all the tools that are required in preparing the scene.
4. Click on the resources window and go to the asset browser.
5. Click on the tutorial folder on the right side of the display panel. You are provided with multiple thumbnails.
6. In the asset browser, click on the mia_servo.fbx file or mia_servo asset and drag it to the viewer's window.
7. FBX context window will appear. Select FBX and click on <no animation>
8. Then on the viewers window a character will appear.
9. Go to the menu bar.
10. Choose File and then click on Save As. Save the file to the directory other than the tutorials folder.

Create a Character Track

In this section, you will create a track in the story window. This part will help in defining the character and adding the animation. Once you are done with “preparing the scene,” the next step is to create a character track.

1. Go to the navigator window and click on the story tab.
