

the Story window's Character Track. The Character Clip settings and choices are displayed in the Asset Settings dialogue.

9. Add a value on "In"
10. Close the asset dialog box.
11. Play the animation.

Process the Clips

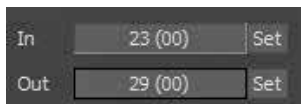

The next step after matching clips is processing the clips.

1. Go to the action track panel.
2. Right click on the character track and select option frame start/end as shown in the image
3. Follow the third step but this time choose Process Track/Subtracks as shown in the image.
4. Save the clip.

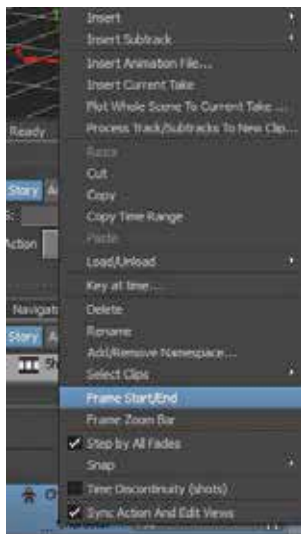

Test the Walk Cycle

The last step of creating the loop is testing the walk cycle. Make sure you have completed the above listed tasks.

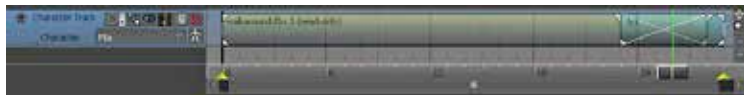

1. Go to the story window control option.
2. Make sure to set Loop/scale option to loop
3. Select the file.
