

- 4. Go to the action track button and click on frame start/end as shown in the “process the clip” step.
- 5. Play the animation. The character will walk smoothly for the total frames selected.

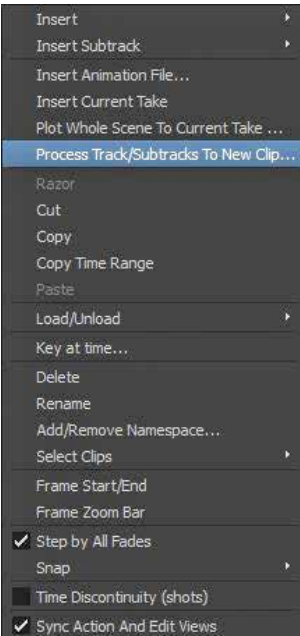

Manipulating Clips

Next chapter is manipulating the clip. Proceed with the same format “Add Favorite Path” in order to start with the steps of manipulating clips.

Preparing the Scene

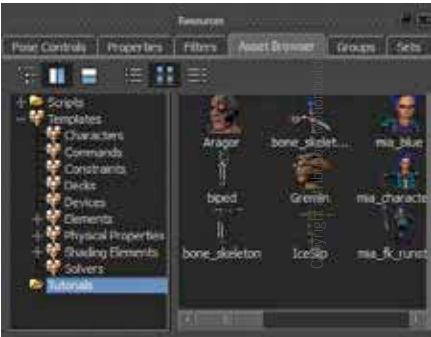

- 1. Click on the Menu Bar and choose the new file.
- 2. Go to the menu bar and select layout and click on editing

Remember, the layout is set to editing by default. In addition, the above image displays all the tools that are required in preparing the scene.
